(54) LIQUID CRYSTAL DISPLAY DEVICE AND ITS DRIVING METHOD

(57)Abstract:

PURPOSE: To provide a liquid crystal display device and its driving method capable of suppressing a vertical directional crosstalk to be generated by the display contents of input display data and also of reducing power consumption.

CONSTITUTION: Data correlation deciding circuit 18 deciding correlation among display data of red, green and blue colors RD, GD and BD is provided in the driving circuit driving a liquid crystal panel 20 and the data correlation signal 19 outputted by the data correlation deciding circuit 18 is inputted to a driver control signal generating circuit 9 and then the inversion system control signal 12 of a dot inversion system or a source line inversion system is generated from the driver control signal generating circuit 9 according to the data correlation signal 19 to make the polarity of a liquid crystal driving voltage 14 invert.
